

vision & precision

Binder Technologie – Decorative metal surfaces and
3D facade elements for architecture.

BINDER TECHNOLOGIE

Cold metal with a bold verve, steel in flow, sustainability as borderless artistic freedom: this is the facade and interior design of tomorrow.

Binder Technologie, located in Karlskron, offers 3D facade and interior design individually created from formed metal. Whether you are looking for new construction, remodeling, industrial construction or urban development, we are your partner as we focus on visible individual accents, always in close cooperation with our customers.

We offer a multi range of possibilities especially for architects and planners to implement elegant and individual solutions for the exterior of a building or for challenging surfaces and spaces to be structured. Rarely before have chances been bigger to bring to life your own ideas and to create real artwork for living and work – regardless what style you are looking for, whether it is classic-elegant, purist-strict, smart, curved or completely unusual.

Thanks to our expertise gained over years in the aviation industry, opaque and semi-transparent elements are created, allowing a wide range of possibilities for light control and diffusion. We offer a wide range of robust elegant metals – **stainless steel, copper, aluminum and more**. Whether you are looking for a cool glossy or warm atmosphere, you have the choice between different forms of surface treatment, like **matt, polished, brushed, anodized or powder-coated surfaces** in various colors.

Our diverse 3D forming processes give a 3D impression to different facades. In the following, we would like to present a few possibilities.

1

BT-3D-100 WAVE | STAINLESS STEEL SHEET, BRUSHED

2

BT-3D-150 SURF | STAINLESS STEEL SHEET, POLISHED

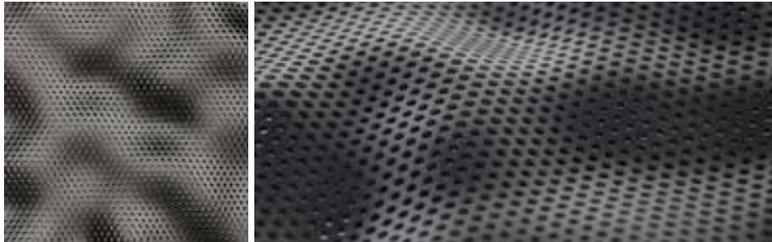

aesthetics & flexibility

Architectural visions become real artwork. In cooperation with our customers, we develop and produce the perfect solution in the field of decorative metal surfaces and 3D facade elements.

3 BT-3D-300 POLYGON | COPPER SHEET, BRUSHED

4 BT-3D-200 HILLYLAND | ALU PERFORATED SHEET, ANODIZED

5 BT-3D-200 HILLYLAND | EXAMPLES OF DIFFERENT VARIANTS
